

Have you seen Streamlyne Research lately?

If not, welcome to the gold standard of research administration! Over the past two years, Streamlyne Research has introduced an abundance of new features and value-adds so research administration programs can grow and thrive. What began as a well-kept secret has become preferred for research administrators as the eRA partner of choice.

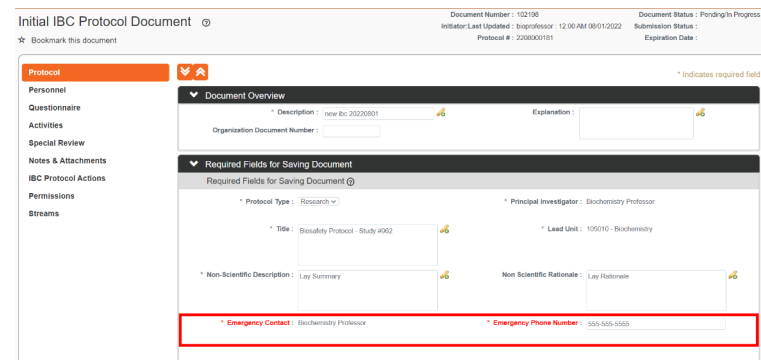

WHAT IS STREAMLYNE RESEARCH?

Streamlyne Research is our comprehensive eRA software that was created to empower efficiency throughout the research administration lifecycle. Whether a research program makes use of one, many, or all of the integrated Streamlyne Research modules, the organization benefits immensely from shared data and seamless integration, which reduces redundant and inconsistent data entry.

From Pre-Award to Award, Compliance, Reporting, and Integrations, ours is the only research eRA to offer ~100% uptime, which creates collaboration and stability across the entire research ecosystem. The popularity of Streamlyne Research also enabled Streamlyne to reach Select Tier status in the Amazon Web Services (AWS) Partner Network, putting Streamlyne in league with other AWS Partners such as Deloitte, Hitachi and IBM.

We will gladly go head to head with any competitor to show you why Streamlyne Research is becoming the trusted eRA of a growing number of leading research programs across the country.

RECENT FEATURED ENHANCEMENTS

Here are just a few of the popular features and enhancements being made available to Streamlyne Research users on a consistent basis:

- The **Dashboards and Bookmarks** feature makes accessing documents so much easier and more efficient. Within each document, a Bookmark can be set for easy access back to the document from anywhere within Streamlyne Research.
- Our **"UI by YOU"** feature allows YOU to create customized templates for use in Streamlyne's Proposal Development Module. YOU decide what fields, panels, and tabs to include for different types of proposal submissions, along with budget information.
- To help end-users complete documents within Streamlyne Research, **customizable instructions** can now be displayed on individual panels within Proposals, Awards, Protocols, and Disclosures based on institutional needs.
- Our **IBC Protocol & Committee Module** is designed to facilitate the institutional review and oversight of research involving biohazards, including recombinant or synthetic nucleic acid molecules, genetically altered organisms, infectious agents, pathogenic organisms, and other hazardous materials.
- To facilitate compliance with U.S. export control laws and regulations involving the transfer of information, technology, and materials to foreign countries and/or foreign persons, our **Export Control Module** allows for the collection of information on all export control activities in research.

Ask us for a **custom tailored demo** based on the needs of your own research program and we'll show you what Streamlyne Research can do for you!

ABOUT STREAMLYNE

Streamlyne is consistently recognized as one of the most trusted and established enterprise software providers for research administrators, leading the industry with proprietary features, world-class service, and unparalleled uptime. Our innovative solutions continually enable thriving research programs to grow and advance in new ways.

We also create ongoing opportunities for our users to help shape our dev roadmap and priorities, such as our annual Streamlyne UP! conference, which gives users the opportunity to network and share feedback directly with key team members.

Q: I'm interested in a Streamlyne Research demo. What do I do?

A: Let a Streamlyne representative know or request one today demos@streamlyne.com
